EDUCATION:

Institution	Duration	Details
Vellore Institute of Technology, Chennai	Sept 2021 - Sept 2025	BTech. – Electronics and Computer Engineering CGPA: 7.17
Good Earth School, Chennai	Mar 2020 - Jul 2021	PCMB Percentage: 89.2
Good Earth School, Chennai	Mar 2018 - May 2019	PCMB Percentage: 82.2

TECHNICAL SKILLS:

Category	Skills
Programming and Data Handling	Python, Pandas, Flask, BS4, Selenium, Pyspark, SQL, Java, Kotlin, JSON, MSAL, python-docx, pypdf, PaddleOCR, EasyOCR, OpenCV.
Machine Learning & AI	Ollama, SMOTE, ML, Deep Learning, Neural Networks, Keras, TensorFlow
Databases & Big Data	PostgreSQL, MySQL, MongoDB, Hadoop, SQOOP, Apache Hive, Kafka
Cloud	Microsoft Azure (Graph API, Azure AI Services, Azure Functions, ADF, ADLS)
Developer Tools	Android Studio, Antigravity, NGROK, IntelliJ, VS Code, GitHub

EXPERIENCE

➤ Inceptez Technologies, Engineering Intern

Mar 2026 – current

- **ClaimEazy Insurance Management App** (<https://github.com/Smartchronon24/ClaimEazy-backend>)
 - Built a role-based Insurance management application where users can sign up to get a policy and post a claim.
 - Implemented authentication and role-based access control for the Client, Admin, Approvers and ETL roles.
 - Developed scalable backend API using Flask to implement dynamic CRUD logic for clean and efficient code.
 - **Technologies Used:** *Python, Flask, Pandas, Kotlin, Firebase, Ngrok, MySQL, MVC, RBAC, GitHub, Fdroid.*
- **LinkedIn Job-Scraper Tool** (<https://github.com/Smartchronon24/LinkedIn-job-scraper>)
 - Engineered a scalable Web Scraper tool to extract jobs from the web to make the data “Analytics-ready”.
 - Built robust logic with lazy loading, stale element handling, and selector fallback for reliable data extraction.
 - Integrated LLM based information extraction to generate a JSON output for skills, experience & job insights.
 - **Technologies Used:** *Python, Selenium, Ollama, Threading, MVC architecture, GitHub, JSON, datetime.*
- **Adaptive AI Email Orchestration & Response System** (<https://github.com/Smartchronon24/EmailDataExtractor>)
 - Engineered an adaptive AI pipeline using multi-stage LLM orchestration for automated email data extraction, context-aware professional reply generation, and structured database-ready information processing.
 - Integrated MS Graph API with dynamic complexity heuristics and regex-based validation to optimize processing latency while achieving 100% Invoice & Tracking ID extraction accuracy and data integrity.
 - **Technologies Used:** *Python, Ollama (Llama 3/Mistral 7B), MySQL, MS Graph API, Regex, Pandas, MVC.*
- **Invoice Image Processing & Template Learning System** (Client : Pothys)
 - **Built** an AI-powered invoice extraction platform using Python, OCR, and Flask to automate structured invoice data extraction, processing, and normalization across diverse vendor formats.
 - **Designed** a scalable metadata-driven mapping engine to standardize vendor-specific invoice fields into a unified SQL-ready schema using dynamic template learning and alias management.
 - **Technologies Used:** *Python, Flask, EasyOCR, PaddleVLM, OpenCV, PyMuPDF, MySQL, JSON, CSV, GitHub.*

○ **ECG Data Processing for Arrhythmia Detection**

- Developed a hybrid deep learning model combining CNN, BiLSTM, and gated convolutions for accurate ECG signal classification to detect arrhythmias using the MIT-BIH Arrhythmia dataset.
- Implemented bandpass filtering, Discrete Wavelet Transform, and Pan-Tompkins algorithm for ECG signal preprocessing and R-peak detection.
- Addressed class imbalance in the dataset using SMOTE, achieving balanced training data and improving model performance for minority classes, with a validation accuracy of 98.88%.
- **Technologies Used:** *Python, TensorFlow, Keras, CNN, BiLSTM, Gated Convolution, WFDB, Pan-Tompkins Algorithm, SMOTE, Scikit-learn, NumPy, Pandas.*

PROJECTS➤ **Smart Cane for Visually Impaired with Fall Detection and Navigation**

- Developed an assistive smart-cane integrating MPU6050, ESP32 and other sensors (Ultrasonic sensor, Vibration Unit, Neo6M etc.)
- Built an Android–Firebase system that tracks cane movement in real time with turn-by-turn navigation support with audio feedback using GPS, Firestore, DAC and Android Text-to-Speech.
- Implemented fall detection using accelerometer and gyroscope data, with real-time alerts via Firebase RTDB.
- Generated a large dataset (500,000+ lines of data) as if the product were to be used in the real-world.
- **Technologies Used:** *Python, Firebase SDK, Kotlin, GCP – Maps SDK, Android-TTS, ESP32.*

➤ **Crop Health Diagnosis and Remediation**

- Developed an ML Application utilizing CNN with 96% accuracy for diagnosing 38 crop diseases from images.
- Trained on 70,000 images for real-time disease identification and crop health reports.
- Used pymongo to store the image data into MongoDB.
- **Technologies Used:** *Python, matplotlib, NumPy, CV2, Keras, TensorFlow, MongoDB.*

➤ **Swim-Lap Counter**

- Designed a lap-counter using a PIC microcontroller with IR sensors for accurate detection.
- Created a Flask backend storing and updating lap data in real time.
- Developed an Android app in Kotlin to sync and display live lap metrics.
- Provided real-time swimmer performance through a responsive, auto-updating interface.
- **Technologies Used:** *Python, Flask, Kotlin, Android Studio, Pico W, IR sensors, Firebase.*

CERTIFICATIONS:

- [AZ900 - Microsoft Certified Azure Fundamentals](#)
- [PCAP - Python Level 2 \(OpenEDG/Python Institute\)](#)
- [PCEP - Python Level 1 \(OpenEDG/Python Institute\)](#)
- [NPTEL - Python for Data Science](#)
- [SmartInternz - Android Application Development](#)
- [Udemy - Complete AI Guide \(ChatGPT & GenAI\)](#)
- [Udemy - The Complete SQL Bootcamp](#)

LANGUAGES:	EXTRA-CURRICULAR ACTIVITIES:
• English - Proficient • Tamil - Native • Hindi - Basic • Japanese - Beginner	• Organized Techno-VIT gaming events. • Competed in FIDE chess tournaments. • Video Editing for YouTube Channel.
