EDUCATION:

Institution	Duration	Details
Vellore Institute of Technology, Chennai	Sept 2021 - Sept 2025	BTech. – Electronics and Computer Engineering CGPA: 7.17
Good Earth School, Chennai	Mar 2020 - Jul 2021	PCMB Percentage: 89.2
Good Earth School, Chennai	Mar 2018 - May 2019	PCMB Percentage: 82.2

TECHNICAL SKILLS:

Category	Skills
Programming and Data Handling	Python, Pandas, Scikit-learn, Flask, BS4, Docling, FastMCP, Selenium, Pyspark, SQL, Java, Kotlin, JSON, MSAL, python-docx, pypdf
Machine Learning & AI	Ollama, MCP, Agentic AI, Multi-Agent, OpenClaw, OCR, SMOTE, ML, Deep Learning, Neural Networks, Keras, TensorFlow
Databases & Big Data	PostgreSQL, MySQL, MongoDB, Docker, Hadoop, SQOOP, Apache Hive, Kafka
Cloud	Azure (Graph API, Azure AI Services, Azure Functions, ADF, ADLS), Oracle
Developer Tools	Android Studio, Copilot, Codex, Claude Code, Antigravity, NGROK, IntelliJ, VSCode, GitHub, Obsidian, N8N

EXPERIENCE

- Inceptez Technologies, Engineering Intern

Mar 2026 – current

 - **Adaptive AI Email Orchestration & Response System** - *Ollama, MS Graph API, MySQL, Regex*
 - Built a multi-stage LLM pipeline for automated email extraction, contextual responses and structured processing
 - Reduced processing overhead via complexity-based routing with 100% keyword extraction accuracy
 - Connected MS Graph API for automated email retrieval and structured processing across incoming messages
 - **Invoice Image Processing** - *EasyOCR, PaddleOCR-VL, Ollama, Flask, OpenCV, PyMuPDF*
 - Built an OCR-based invoice pipeline converting multi-page documents into structured JSON and CSV outputs.
 - Designed metadata-driven template learning to normalize vendor-specific data into a unified SQL-ready schema.
 - Achieved 98.56% extraction accuracy through validation, template learning, vendor-specific field normalization.
 - **ClaimEazy Insurance Management App** - *Flask, Kotlin, Firebase, MySQL, RBAC*
 - Built a role-based insurance platform enabling clients to manage policies and claims via controlled workflows
 - Developed scalable Android application integrated with Flask APIs with dynamic CRUD and RBAC
 - Supported controlled access across Client, Admin, Approver, and ETL roles through authentication
- SmartInternz, Engineering Intern

Sep 2024 – Oct 2024

 - **ECG Data Processing for Arrhythmia Detection** - *TensorFlow, Keras, CNN, BiLSTM, SMOTE*
 - Developed a hybrid CNN-BiLSTM model with gated convolutions for automated ECG arrhythmia classification
 - Achieved 98.88% validation accuracy using data preprocessing and SMOTE for imbalanced arrhythmia classes
 - Applied bandpass filtering, Discrete-wavelet-transform, Pan-Tompkins for preprocessing and R-peak detection

PROJECTS

- **Jarvis PA: personal research project** - *LLMs, MCP, Agentic AI, Agentic Frameworks, OpenClaw, Oracle-cloud*
 - Developed a scalable multi-agent framework having planner, router, worker agent layers that performs as a PA
 - Designed JarvisMCP that has 100+ tools with smart ToolRegistry that easily fits in with any framework of choice
 - Studied Prompt caching mechanism to setup a smart multi-layered agentic development platform to reduce cost
 - Integrated OpenClaw & JarvisMCP and deployed to Oracle-Cloud to gain access to the PA from WhatsApp 24/7
- **LinkedIn Job-Scraper** - *Tool Selenium, Ollama, Threading, JSON, MVC architecture*
 - Engineered a scalable AI-powered job scraper with resilient extraction and automated information processing
 - Produced analytics-ready job datasets with structured skills, experience, timestamps and insights for analysis
 - Integrated LLM extraction to generate JSON outputs containing skills, experience and job insights
- **Smart Cane for Visually Impaired** - *ESP32, Python, Firebase, Kotlin, Google Maps, TTS, Pyspark*
 - Engineered a smart cane with real-time navigation, obstacle detection, fall detection and audio & haptic feedback.
 - Generated 500,000+ data points and enabled real-time alerts and movement tracking through Firebase.
 - Integrated accelerometer, gyroscope sensing for fall detection and Android app for accessibility.
- **Crop Health Diagnosis and Remediation** – *Python, TensorFlow, Keras, OpenCV, MongoDB*
 - Developed a CNN-based application achieving 96% accuracy for diagnosing 38 crop diseases from images.
 - Trained on 70,000 images for real-time disease detection and automated crop health reporting.
- **Swim-Lap Counter** - *Python, Flask, Kotlin, Firebase, PIC Microcontroller*
 - Engineered an automated lap counter using IR sensors with real-time swimmer performance tracking.
 - Built a live metrics system enabling synchronized lap updates and responsive performance monitoring.

CERTIFICATIONS:

- [AZ900 - Microsoft Certified Azure Fundamentals](#)
- [PCAP - Python Level 2 \(OpenEDG/Python Institute\)](#)
- [PCEP - Python Level 1 \(OpenEDG/Python Institute\)](#)
- [NPTEL - Python for Data Science](#)
- [SmartInternz - Android Application Development](#)
- [Udemy - Complete AI Guide \(ChatGPT & GenAI\)](#)
- [Udemy - The Complete SQL Bootcamp](#)

LANGUAGES:	EXTRA-CURRICULAR ACTIVITIES:
• English - Proficient • Tamil - Native • Hindi – Basic • Japanese - Beginner	• Organized Techno-VIT gaming events. • Competed in FIDE chess tournaments. • Video Editing for YouTube Channel. • Duolingo: 450+ day Japanese learning streak
